

# Internet of Things (IoT) Information Display

**Benjamin Daszkiewicz & Jacob Nading**

**Advised by Dr. Aleksander Malinowski**

# Contents

- Introduction
  - Problem Statement
- Functionality
  - Minimum requirements
  - Additional
  - System hardware flowchart
  - SDLC Flowcharts (subsystems)
- Parts list
- Research & prior work
  - Existing projects/patents
  - Project history
- Efforts completed to date
- Schedule of deadlines
- Division of labor
- Near future
- References

# Introduction

- Modern technology-driven world
- Use of technology for constant improvement
- Busy people, volatile schedules
  - Need the ability to communicate updating schedules
  - Share information with coworkers or students
  - Seamless synchronization between systems

## The IoT Information Display

# Problem Statement

- Idea for project by Dr. Malinowski
- Increase ease of communication between students and professors
  - Busy schedules
  - Encourage use of office hours
  - Clumsy web alternatives
  - Difficulty in making multiple schedules apparent to others
  - Abrupt change in schedule causes multilayered problem of informing those affected

# Contents

- Introduction
  - Problem Statement
- **Functionality**
  - Minimum requirements
  - Additional
  - System hardware flowchart
  - SDLC Flowcharts (subsystems)
- Parts list
- Research & prior work
  - Existing projects/patents
  - Project history
- Efforts completed to date
- Schedule of deadlines
- Division of labor
- Near future
- References

# Minimum Functionality Requirements

- Daily calendar data
- Short memos/announcements
- Advertisements
- Paging function with geofencing
- Current and forecast weather data
- Attractive, user-friendly interface

# Additional Proposed Functionality

- **Sensors**
  - Camera
  - Door sensor
- **Online Expansion**
  - Remote usability
  - Get notified on certain updates in an easy-to-read format
  - See a broader week schedule without having to look in-person
  - Push notifications to phones and other devices for better spreading of information
- **E-mail and/or text instructor from Display**
- **Appointment Scheduler**

# System Hardware Flowchart

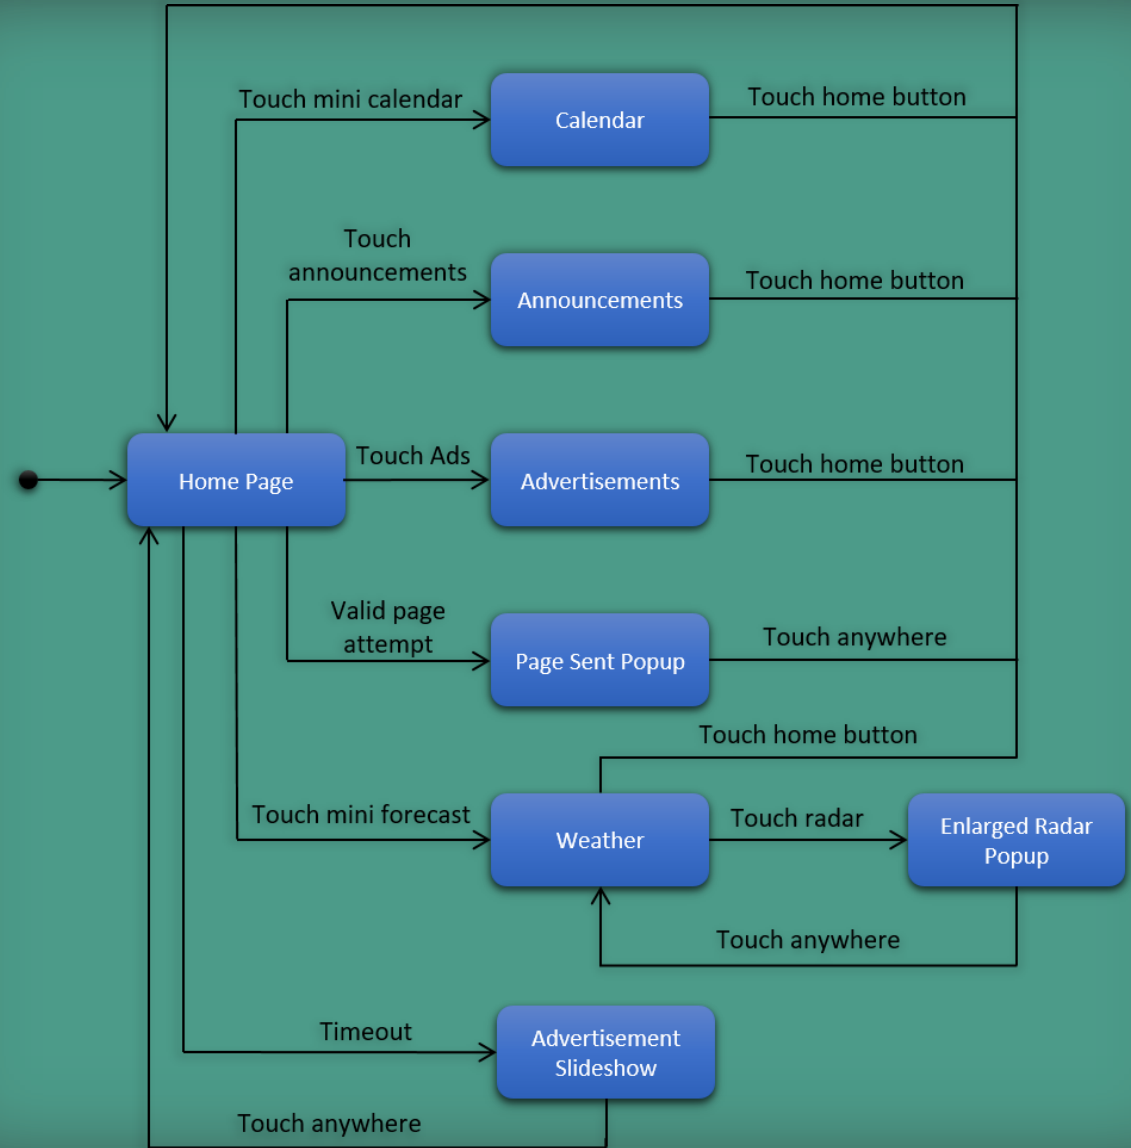

# Modes of Operation

- On
  - System is powered and functioning
- Off
  - System is not supplied with power
- Standby
  - Advertisements or
  - Powered but blank screen
  - Reduce power consumption
- Subsystems

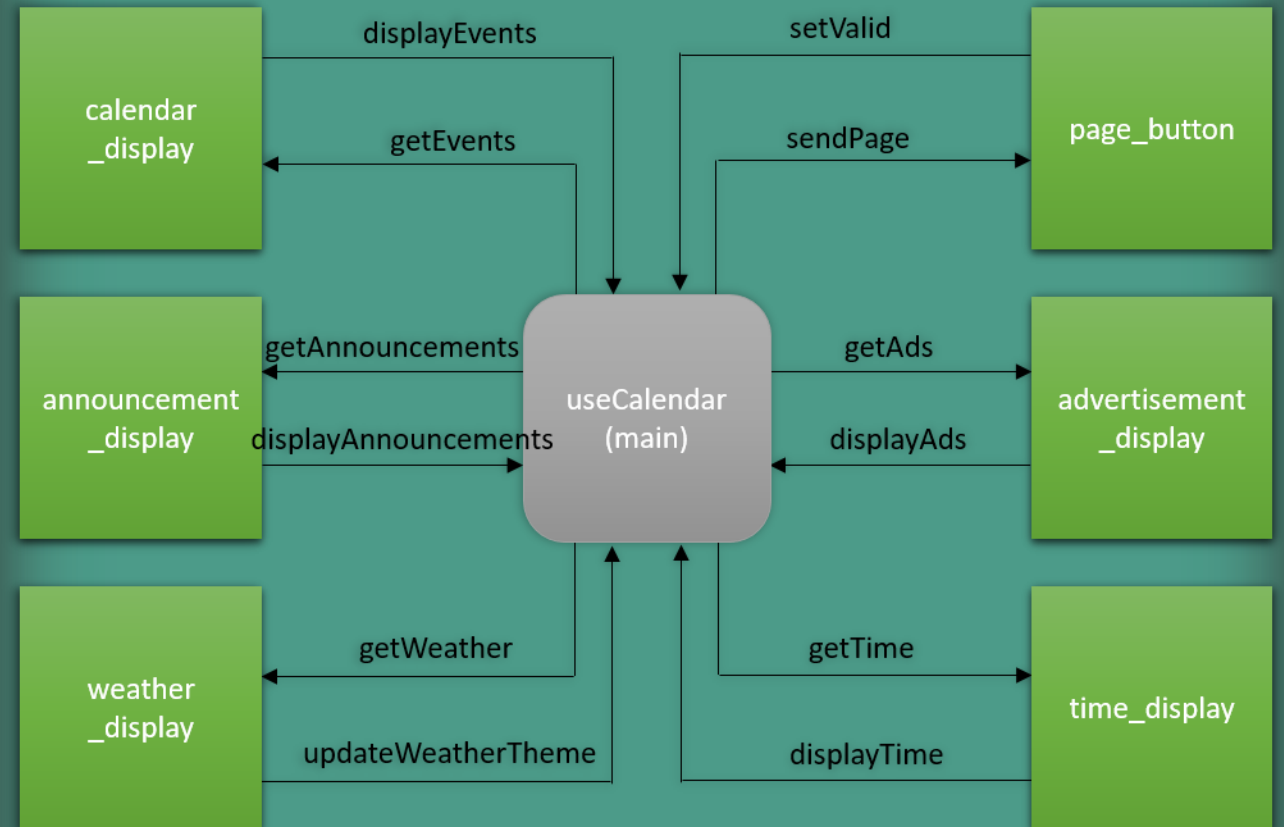

# High Level State Transition Diagram

Breaks down steady states of software and transition triggers

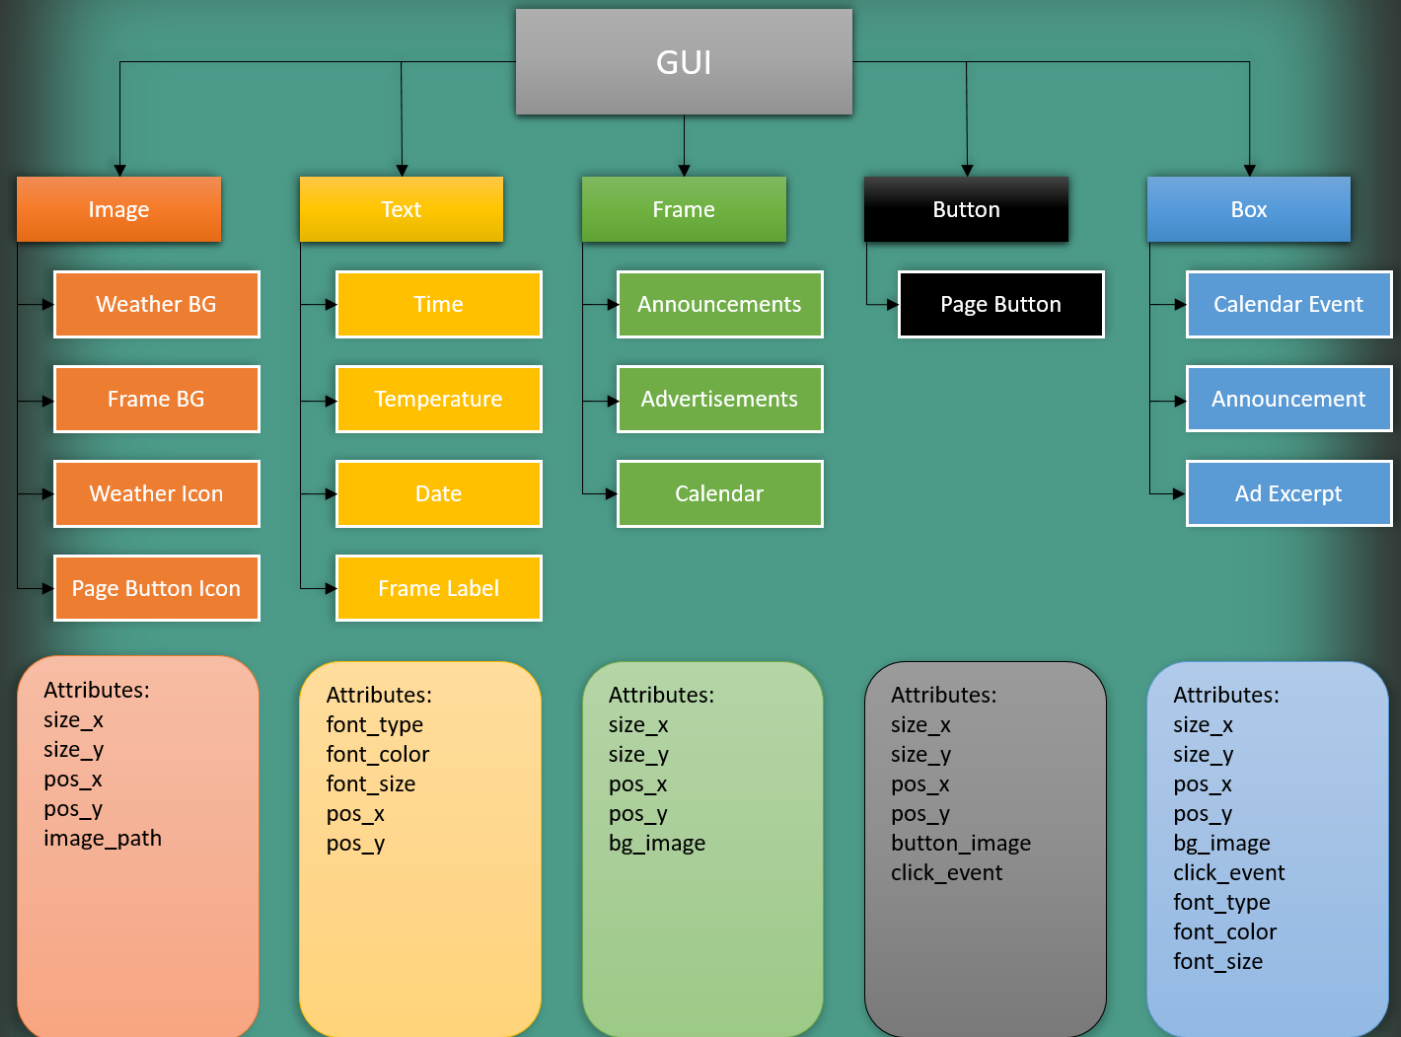

# Context Data Flow Diagram

Shows data transfer between main function and subsystems

# GUI Design Model

Breaks down GUI elements and major attributes

# Contents

- Introduction
  - Problem Statement
- Functionality
  - Minimum requirements
  - Additional
  - System hardware flowchart
  - SDLC Flowcharts (subsystems)
- Parts list
- Research & prior work
  - Existing projects/patents
  - Project history
- Efforts completed to date
- Schedule of deadlines
- Division of labor
- Near future
- References

# Parts List

Qty	Item Description	Source	Price/Unit	Price
1	Eleduino 13.3" 1080P IPS Capacitive Touch Display (sky black)	Amazon.com	\$198.00	\$189.00
2	CanaKit Raspberry Pi 3 Kit	Amazon.com	\$49.99	\$99.98
2	SanDisk Ultra 8GB Class 10 UHS-I MicroSDHC	Amazon.com	\$9.99	\$19.98
1	Rankie Micro HDMI to HDMI Cable, 10 Feet	Amazon.com	\$9.99	\$9.99
1	Micro USB Cable, 3 Pack 10 ft Braided High Speed USB 2.0 A Male to Micro B	Amazon.com	\$10.99	\$10.99
			Subtotal:	\$329.94

# Contents

- Introduction
  - Problem Statement
- Functionality
  - Minimum requirements
  - Additional
  - System hardware flowchart
  - SDLC Flowcharts (subsystems)
- Parts list
- Research & prior work
  - Existing projects/patents
  - Project history
- Efforts completed to date
- Schedule of deadlines
- Division of labor
- Near future
- References

# Existing Products/Projects

DAKboard

- Customizable Interface
- Photos, Calendar, and Weather

Smart Mirror

- (Amazon) Alexa Option
- 2-way mirror with Monitor attached

Raspberry Pi Framed Informational Display

- Monitor enclosed within a frame
- Buttons on side to toggle between sections

# Existing Patents

- Content display device with sensors  
<https://patents.google.com/patent/WO2016061626A1/en?q=smart>
- Smart interactive billboard device  
<https://patents.google.com/patent/US20050021393A1/en?q=smart>
- Raspberry Pi based smart home control device with touch display  
<https://patents.google.com/patent/CN106789459A/en?q=smart>

# Previous Work (2016-2017)

- Cole Lindeman & Jason Morris
- IoT Smart Calendar
- User and door sensors
- Browser based interface
  - php, HTML, etc.
- Relies on default view for calendar

# Contents

- Introduction
  - Problem Statement
- Functionality
  - Minimum requirements
  - Additional
  - System hardware flowchart
  - SDLC Flowcharts (subsystems)
- Parts list
- Research & prior work
  - Existing projects/patents
  - Project history
- Efforts completed to date
- Schedule of deadlines
- Division of labor
- Near future
- References

# Efforts Completed to date

- Design
  - Interactions between user and device
  - Display layout
  - Functionality and added features
- Research
  - Analyze other interactive / informative displays
  - Parts list/ordering
  - Availability of display
  - Self instruction in wxPython module, Twitter, and Google Calendar API
- Graphics & Software
  - Some graphical aspects of the home screen already created
- Environment
  - Raspbian Desktop or Xubuntu
  - Python v2.7
  - Environment installed, configured, and tested on hardware

# Contents

- Introduction
  - Problem Statement
- Functionality
  - Minimum requirements
  - Additional
  - System hardware flowchart
  - SDLC Flowcharts (subsystems)
- Parts list
- Research & prior work
  - Existing projects/patents
  - Project history
- Efforts completed to date
- **Schedule of deadlines**
- Division of labor
- Near future
- References

# Schedule of Deadlines (Fall 2017)

Date	Item Due / Requirement Met
Fall 2017	
11/16/17	Proposal presentation draft *
11/30/17	Project proposal and presentation *
12/7/17	Website with proposal presentation and report *
12/7/17	Non-functional, rough layout prototype for display written in Python
12/7/17	Majority of graphical project aspects created

\* Department deliverable deadline

■ Project completion milestone

# Schedule of Deadlines (Spring 2018)

Date	Item Due / Requirement Met
Spring 2018	
2/16/18	Working calendar and announcements prototype (API work) with home screen and functional weather icon
2/23/18	Added advertisements and display mounted
3/9/18	Student expo registration *
3/16/18	Paging functionality (Geofence work)
3/23/18	Weather/radar screen
3/29/18	Final report *
4/5/18	Student Expo poster *
4/19/18	Final presentation draft *
5/1/18	All materials completed and uploaded to website *

\* Department deliverable deadline

■ Project completion milestone

# Contents

- Introduction
  - Problem Statement
- Functionality
  - Minimum requirements
  - Additional
  - System hardware flowchart
  - SDLC Flowcharts (subsystems)
- Parts list
- Research & prior work
  - Existing projects/patents

# Division of Labor

## Benjamin Daszkiewicz

- GUI Programming
  - Main page script will pull returned values of all other functions for display
- Calendar section
  - Google Calendar API
- Weather functionality
  - Weather change based on current conditions
  - Forecast page/radar display

## Jacob Nading

- Graphic components
  - Icon/component design
  - Layout and visual design
- Announcements section
  - Twitter API
- Paging system
  - Geofencing interface
  - Geofencing app selection

# Contents

- Introduction
  - Problem Statement
- Functionality
  - Minimum requirements
  - Additional
  - System hardware flowchart
  - SDLC Flowcharts (subsystems)
- Parts list
- Research & prior work
  - Existing projects/patents
  - Project history
- Efforts completed to date
- Schedule of deadlines
- Division of labor
- Near future
- References

# Near Future

- Create solution to screen power dissipation
  - Measure power consumption and amperage drawn
- Create "dummy" interface using wxPython module
- Finish major graphics images for use in GUI homescreen
- Come up with mounting solution
  - Should be designed with screen cooling in mind

# Contents

- Introduction
  - Problem Statement
- Functionality
  - Minimum requirements
  - Additional
  - System hardware flowchart
  - SDLC Flowcharts (subsystems)
- Parts list
- Research & prior work
  - Existing projects/patents
  - Project history
- Efforts completed to date
- Schedule of deadlines
- Division of labor
